Crash test weight: 1627 kg

### SAFETY EQUIPMENT

Front seatbelt pretensioners	SI	Driver knee airbag	NO
Driver frontal airbag	SI		
Front passenger frontal airbag	SI		
Side body airbags	SI		
Side head airbags	NO		

## COMMENTS

**Adult occupant:** In the frontal impact the driver and passenger heads were both well protected by the restraint system. The chest protection was adequate. There were no knee and tibia contact points visible for the driver on the dashboard which is desirable. But there were hazardous structures in the area of the fascia that could be impacted by an larger occupants knees.

**Child Occupant:** The child seat for the 1,5 and 3 year old child offered sufficient protection. The installation instructions on both child seats were insufficient and not permanently attached to the seat. The vehicle did give warnings as to the hazards associated with installing a rearward facing child seat on the front passenger seat with an active airbag. Both CRS have ISOFIX anchorage systems and were installed with the isofix connectors.

(\*) Side impact test under UNECE95 and passing the test is required for the 5 stars. OEMs can request the mentioned test voluntarily and its result to be published along with the other results of the model. For Latin NCAP, certain level of safety provided by a car, is considered only when it has been demonstrated in a crash test.
