BODYSHELL INTEGRITY

UNSTABLE

COMMENTS

Adult occupant: - The protection offered to the driver head was poor. Also the Chest protection was poor due to the high deflection and contact with steering wheel, for this reason the star capping was applied. Passenger's chest protection was marginal. Both passengers' knees could impact with dangerous structures in the dashboard like the Tran fascia tube. The bodyshell was rated as unstable. The bodyshell was not capable of withstanding any further loading.

CHILD RESTRAINT SYSTEM

	CHILD RESTRAINT	DYNAMIC SCORE	CRS TYPE	ADJUST	POSITION
18 month old child	Britax Baby Safe	3.55 (8 max)	0+	Belted	RWF
3 year old child	Britax Duo Plus	2 (8 max)	1	Belted	FWF

COMMENTS

Child occupant: The child seat for the 3 year old child was unable to prevent excessive forward movement during the impact and offered low protection to neck and chest. The dynamic performance of the 18 months CRS showed that the head of the dummy was not contained in the CRS during the crash. Some of the CRS that were tested for installation failed in specific positions.
